Safety precautions

	Read the safety precautions and the user guide before use.
	The device cannot be used in the event of a power failure. In case of a power failure it is also **not** possible to make **emergency calls**. Emergency numbers **cannot** be dialled if the **keypad/display lock** is activated!

	Use only **rechargeable batteries** that correspond to the **specification** (see list of permitted batteries ➡ www.gigaset.com/service). Never use a conventional (non-rechargeable) battery or other battery types as this could result in significant health risks and personal injury. Rechargeable batteries, which are noticeably damaged, must be replaced.
	The handset must not be operated if the battery cover is open.

	Do not use the devices in environments with a potential explosion hazard (e.g. paint shops).

	The devices are not splashproof. For this reason do not install them in a damp environment such as bathrooms or shower rooms.

	Use only the power adapter indicated on the device. Whilst charging, the power socket must be easily accessible.

	Remove faulty devices from use or have them repaired by our Service team, as these could interfere with other wireless services.

	Do not use the device if the display is cracked or broken. Broken glass or plastic can cause injury to hands and face. Send the device to our Service department to be repaired.

	Do not hold the rear of the handset to your ear when it is ringing or when speaker mode is activated. Otherwise you risk serious and permanent damage to your hearing. The phone may cause interference in analogue hearing aids (humming or whistling) or cause them to overload. If you require assistance, please contact the hearing aid supplier.

	Keep small cells and batteries, which can be swallowed, out of the reach of children. Swallowing a battery can lead to burns, perforation of soft tissue and death. Severe burns can occur within 2 hours of swallowing. In the case of a swallowed cell or battery, seek medical care immediately.

	Using your telephone may affect nearby medical equipment. Be aware of the technical conditions in your particular environment, e.g. doctor's surgery. If you use a medical device (e.g. a pacemaker), please contact the device manufacturer. They will be able to advise you regarding the susceptibility of the device to external sources of high frequency energy (for the specifications of your Gigaset product see "Technical data").

Getting started

Contents of the package

- One **base**,
- One power adapter for the base,
- One phone cable,
- One **handset**
- One battery cover
- Two batteries
- One user guide

Models with multiple handsets, per handset:

- One handset
- One charging cradle including power adapter
- Two batteries and one battery cover

> **!** The base station and charging cradle are designed for use in closed, dry rooms within a temperature range of +5 °C to +45 °C.
>
> Position the base on a level, non-slip surface at a central point in the flat or house. The device's feet do not usually leave any marks on surfaces. However, due to the multitude of different varnishes and polishes used on furniture, contact marks on the surfaces cannot be completely ruled out.
>
> Never expose the telephone to heat sources, direct sunlight or other electrical devices.
>
> Protect your telephone from moisture, dust, corrosive liquids and vapours.
>
> This device is only suitable for a maximum installation height of 2 m.

Base

The display of the base with answering machine has protective film. ▶ **Please remove the protective film**

▶ Insert the phone cable into the connection socket ▢1 at the rear of the base until it clicks into place.

▶ Insert the power cable from the power adapter into the connection socket ▢2.

▶ Plug in the power adapter ▢3 and the phone jack ▢4.
Device without answer machine   Device with answer machine
If connecting to a router:

▶ Plug the phone cable into the telephone connection socket on the router ▢5.

Device without answer machine   Device with answer machine

> The network cable must **always be connected** in order to function, as the phone will not operate without a power supply.

Handset

Connecting the charging cradle (if included in the delivery)

▶ Connect the flat plug of the power adapter 1 .

▶ Plug the mains unit into your power socket 2 .

To remove the plug from the charging cradle again:

▶ Disconnect the power adapter from the mains power supply.

▶ Press the release button 3 .

▶ Remove the flat plug 4 .
Setting up the handset for use

The display is protected by a plastic film. ▶ **Please remove the protective film!**

Inserting the batteries

Only use rechargeable batteries, as this could otherwise result in significant health risks and personal injury. For example, the outer casing of the batteries could be destroyed or the batteries could explode. The device could also malfunction or be damaged as a result of using batteries that are not of the recommended type.

▶ Insert the batteries (for correct +/- direction, see diagram).

▶ Fit the battery cover from the top.

▶ Press the cover until it clicks into place.

To re-open the battery cover:

▶ Insert a fingernail behind the notch at the top of the cover and slide it downwards.

Charging the batteries

▶ Charge the batteries fully prior to first use in the charging cradle.

The batteries are fully charged when the power icon ⚡ disappears from the display.

$$\mathcal{Z}\square \ + \ \bigodot_{8\,h} \ = \ \blacksquare$$

ℹ️ Batteries may heat up during charging. This is not dangerous.

After a time, the charge capacity of the battery will decrease for technical reasons.

Handsets contained in the package have already been registered to the base. In the event that a handset is not registered however (indicated by **Please register handset**), register the handset manually (➜ p. 54).

Provider-specific functions (network services)

Network services depend on the network (analogue fixed line network or IP telephony) and on the network provider (service provider) and must be requested from that provider if required.

You will find a description of the features on your network provider's website or at one of their store branches.

If you require assistance, please contact your network provider.

> **!** Requesting network services may incur **additional costs**. Please consult your network provider.

Network services fall into two distinct groups:

- Network services that are activated when in idle status for the following call or all subsequent calls (for example, "calling anonymously"). These are activated/deactivated via the 🗗 **Select Services** menu.
- Network services that are activated during an external call, (for example, "consultation call", "swapping between two callers"). These are made available during an external call either as an option or by using a display key (e.g. **Ext. Call**).

> **i** To activate/deactivate the features, a code is sent to the telephone network.
>
> ▶ After a confirmation tone from the telephone network, press 🔚.
>
> It is not possible to reprogram the network services.

Calling Line Identification

During a call, the caller's number is transferred (CLI = Calling Line Identification) and may be displayed on the recipient's display (CLIP = CLI presentation). If the caller's number is withheld, it will not be displayed to the recipient. The call is made anonymously (CLIR = CLI Restriction).

Copying an entry/directory

The sending and receiving handset must both be registered to the same base station.

The other handset and the base station are able to send and receive directory entries.

An external call interrupts the transfer.

Sounds are not transferred. Only the date is transferred for an anniversary.

Both handsets support vCards:

*   No entry with the name is available: a new entry is created.
*   An entry with the name is already available: The entry is expanded to include the new numbers. If the entry contains more numbers than allowed by the recipient handset, a second entry is created with the same name.

The recipient handset does not support vCards:

A separate entry is created and sent for each number.

The sending handset does not support vCards:

A new entry is created on the receiving handset and the transferred number is added to the **Phone (Home)** field. If an entry with this number already exists, the copied number is discarded.

Copying individual entries

Deactivate the alarm: ▶ **OFF**

Repeat the alarm (snooze mode): ▶ Press **Snooze** or any key . . . the alarm is switched off and repeated after 5 minutes.

Baby monitor

When the baby monitor is switched on, the stored (internal or external) destination number is called as soon as a defined noise level is exceeded in the vicinity of the handset. The alarm to an external number is cancelled after approximately 90 seconds.

You can answer the alarm using the **Two Way Talk** function. This function is used to switch the loudspeaker of the handset located in the baby's room on or off.

In baby monitor mode, incoming calls are only indicated on the display (**without ringtone**). The display backlight is reduced to 50%. Advisory tones are deactivated. All keys are locked, with the exception of the display keys and the centre of the control key.

If you accept an incoming call, the baby monitor mode is suspended for the duration of the call, but the function **remains** activated. The baby monitor mode is not deactivated by switching the handset off and on again.

ⓘ   The handset should be positioned 1 to 2 metres away from the baby. The microphone must point towards the baby.

Activating the function reduces the operating time of your handset. For that reason, place the handset in the charging cradle if necessary.

The baby monitor is activated 20 seconds after switching on.

The answer machine for the destination number must be switched off.

After switching on:

▶   Test sensitivity.

ECO DECT

The device range is set to maximum as default. This guarantees the best connection between the handset and the base station. In idle status, the handset will not function (as it is not transmitting). Only the base station will maintain contact with the handset via a low wireless signal. During a call, the transmission power automatically adapts to the distance between the base station and handset. The smaller the distance to the base, the lower the radiation.

To reduce the radiation further:

▸ **■** ▸ . . . use **⬚** to select **⚙** **Settings** ▸ **OK** ▸ **⬚** **ECO DECT** ▸ **OK** ▸ **Maximum Range** ▸ **Change** (**■** = deactivated)

ⓘ   The range is also reduced with this setting.

It is not possible to use a repeater to increase the range.

Deactivating radiation in idle status

▸ **■** ▸ . . . use **⬚** to select **⚙** **Settings** ▸ **OK** ▸ **⬚** **ECO DECT** ▸ **OK** ▸ **⬚** **No Radiation** ▸ **Change** (**☑** = activated)

ⓘ   To benefit from the advantages of the setting **No Radiation**, all registered handsets must support this feature.

If the setting **No Radiation** is activated and a handset is registered to the base that does not support this feature, **No Radiation** is automatically deactivated. As soon as this handset is de-registered, **No Radiation** will automatically be re-activated.

The wireless connection will only be established for an incoming or outgoing call and the connection will be delayed by about 2 seconds.

In order that a handset can establish a wireless connection with the base station more quickly for an incoming call, it must "listen" to the base station more often, i.e. scan the environment. This increases power consumption and reduces the standby and talk-time of the handset.

When **No Radiation** is activated, there will be no range display/range alarm on the handset. Contactability can be tested by attempting to establish a connection.

If a telephone number in the SMS text is recognised, it is automatically highlighted.

- Save the number in the directory: ▶ ➡️▯

  If the number is to also be used to send an SMS, save the number including the local area code (dialling code).

- Dial a number: ▶ Press the Talk key ▭
- Select the next number, if an SMS contains multiple numbers: ▶ . . . use ⬍ to scroll down until the first number has disappeared from the display.

ⓘ   The +-icon is not copied for international area codes.

     ▶ You should then enter "00" at the start of the number.

SMS with vCard

The vCard is an electronic business card. It is indicated by the ▤ icon in the SMS text. A vCard can contain a name, home number, work number, mobile number and a birthday. Individual entries in a vCard can be saved to the directory one after the other.

When reading an SMS containing the vCard: ▶ **View** ▶ **Save**

The directory is opened automatically. The number and name are copied. If a birthday is entered on the vCard, the date is copied to the directory as an anniversary. If necessary, edit the entry in the directory and save it. You will return to the vCard automatically.

SMS service centres

The number for at least one SMS service centre must be saved in the device to be able to send SMS messages. The SMS service centre number can be obtained from the service provider.

SMS messages are received from **every** entered SMS service centre as long as they are registered with their service provider.

Your SMS messages are sent via the SMS service centre that is entered as the active send centre. Only one SMS service centre can be the active send centre at any one time.

Entering/changing the SMS service centre, setting the send service centre

Save settings: ▸ **Save**

> **!** If you have agreed a flat fixed line network rate, the chargeable numbers with dialling code 0900 are often blocked. If, in this case, a 0900 number is entered for the SMS service centre, you will not be able to send text messages from your phone.
>
> If the attempt to send fails, the SMS is saved in the incoming messages list and indicated as failed.

SMS to PABXs

•   The **Call Line Identification** must be **forwarded** to the extension of the PABX (CLIP).

•   If necessary, the access code/outside line code must be prefixed to the number of the SMS service centre (depending on your PABX). To test: Send an SMS to your own number, once with the access code and once without.

•   If the SMS is sent without the extension number, it will not be possible for the recipient to answer directly.

Activating/deactivating first ring muting

Every incoming SMS is indicated by a single ring. If such a "call" is answered, the SMS is lost. To prevent this, mute the first ring for all external calls. In idle status:

▶   ■ ▶ ⁎ # 0 5 # 1 9 . . . the current setting flashes in the input field (e.g. **1**) . . . then

Do not mute the first ringtone:	▶ 0 ▶ **OK**

Multiple handsets

Up to six handsets can be registered to the base station.

Each registered device is assigned an internal number (1 – 6) and an internal name (**INT 1** – **INT 6**). The number or name assigned can be changed.

If all internal numbers have already been assigned at the base station: ▶ de-register a handset that is no longer needed

Registering the handset

A handset can be registered on up to four base stations.

Troubleshooting

The display is blank.
- The handset is not activated. ▶ Press and **hold** 🔲 .
- The battery is empty. ▶ Charge the battery or replace it

"No Base" flashes on the display.
- The handset is outside the range of the base station. ▶ Move the handset closer to the base station
- The base is not activated. ▶ Check the base station power adapter
- The base station's range is reduced because **Maximum Range** is deactivated.
  - ▸ Activate **Maximum Range** or reduce the distance between the handset and base station

"Please register handset" flashes on the display.
- The handset has not yet been registered or was de-registered due to the registration of an additional handset (more than 6 DECT registrations). ▶ Re-register the handset

The handset does not ring.
- The ringtone is deactivated. ▶ Activate ringtone
- Call forwarding is set. ▶ Deactivate call forwarding.
- The phone does not ring if the caller has withheld his number.
  - ▸ Activate the ringtone for anonymous calls.
- The phone does not ring during a specific period or for certain numbers.
  - ▸ Check the time control for external calls

No ringtone/dial tone from the fixed line network.
- Incorrect phone cable. ▶ Please always use the phone cable supplied or ensure that the pin connections are correct when purchasing from a retailer.

The connection always terminates after approx. 30 seconds.
- A repeater (earlier than Version 2.0) has been activated or deactivated. ▶ Switch the handset off and back on again.

Error tone sounds after system PIN prompt.
- You have entered the wrong system PIN. ▶ Repeat the process, reset the system PIN to 0000 if required

Forgotten system PIN.
- ▸ Reset the system PIN to 0000

The other party cannot hear you.
- The handset is "muted". ▶ Activate the microphone again

Some of the network services do not work as specified.
- Features are not enabled. ▶ Contact the network provider for details.

The caller's number is not displayed.
- **Calling Line Identification** (CLI) is not enabled for the caller. ▶ The **caller** should ask the network provider to enable Calling Line Identification (CLI).
- **Calling Line Identification Presentation** (CLIP) is not supported or enabled by the network provider. ▶ Ask the network provider to enable Caller Line Identification Presentation (CLIP).
- The telephone is connected via a PABX or a router with an integrated PABX (gateway) that does not transmit all information.
    ‣ Reset the system: Briefly pull out the power plug. Reinsert the plug and wait until the device restarts.
    ‣ Check the settings on the PABX and activate phone number display, if necessary. To do this, search for terms such as CLIP, calling line identification, telephone number identification, caller ID, ... in the system user guide or ask the system manufacturer.

You hear an error tone when keying in (descending tone sequence).
- Action has failed/invalid input. ▶ Repeat the process. Read the display and refer to the user guide if necessary.

You cannot listen to messages on the network mailbox.
- Your PABX is set to pulse dialling. ▶ Set your PABX to tone dialling.

Please have your proof of purchase ready when calling.

Please note that if the Gigaset product is not sold by authorised dealers in the national territory the product may not be fully compatible with the national telephone network. It is clearly specified on the box near the CE mark for which country/countries the equipment has been developed. If the equipment is used in a manner inconsistent with this advice or with the instructions of the manual and on the product itself, this may have implications on the conditions for warranty or guarantee claims (repair or exchange of product).

In order to make use of the warranty, the product purchaser is asked to submit a receipt which proves the date of purchase (date from which the warranty period starts) and the type of goods that have been purchased.

Guarantee Certificate - United Kingdom and Ireland

Without prejudice to any claim the user (customer) may have in relation to the dealer or retailer, the customer shall be granted a manufacturer's Guarantee under the conditions set out below:

• In the case of new devices and their components exhibiting defects resulting from manufacturing and/or material faults within 24 months of purchase, Gigaset Communications shall, at its own option and free of charge, either replace the device with another device reflecting the current state of the art, or repair the said device. In respect of parts subject to wear and tear (including but not limited to, batteries, keypads, casing), this warranty shall be valid for six months from the date of purchase.

• This Guarantee shall be invalid if the device defect is attributable to improper care or use and/or failure to comply with information contained in the user manuals. In particular claims under the Guarantee cannot be made if:

• The device is opened (this is classed as third party intervention)

• Repairs or other work done by persons not authorised by Gigaset Communications.

• Components on the printed circuit board are manipulated

• The software is manipulated

• Defects or damage caused by dropping, breaking, lightning or ingress of moisture. This also applies if defects or damage was caused by mechanical, chemical, radio interference or thermal factors (e.g.: microwave, sauna etc.)

• Devices fitted with accessories not authorised by Gigaset Communications

• This Guarantee shall not apply to or extend to services performed by the authorised dealer or the customer themselves (e.g. installation, configuration, software downloads). User manuals and any software supplied on a separate data medium shall be excluded from the Guarantee.

• The purchase receipt, together with the date of purchase, shall be required as evidence for invoking the Guarantee. Claims under the Guarantee must be submitted within two months of the Guarantee default becoming evident.

• Ownership of devices or components replaced by and returned to Gigaset Communications shall vest in Gigaset Communications.

• This Guarantee shall apply to new devices purchased in the European Union. For Products sold in the United Kingdom and in the Republic of Ireland the Guarantee is issued by: Gigaset Communications UK Limited, 2 White Friars, Chester, CH1 1NZ.

• Any other claims resulting out of or in connection with the device shall be excluded from this Guarantee. Nothing in this Guarantee shall attempt to limit or exclude a Customers Statutory Rights, nor the manufacturer's liability for death or personal injury resulting from its negligence.

• The duration of the Guarantee shall not be extended by services rendered under the terms of the Guarantee.

• Insofar as no Guarantee default exists, Gigaset Communications reserves the right to charge the customer for replacement or repair.

• The above provisions do not imply a change in the burden of proof to the detriment of the customer.

To invoke this Guarantee, please contact the Gigaset Communications helpdesk. This number is also to be found in the accompanying user guide.

Exclusion of liability

Your handset's display consists of pixels. Each pixel consists of three sub-pixels (red, green, blue).

It may be the case that a sub-pixel is missing or has a colour deviation.

A warranty claim is only valid if the maximum number of permitted pixel errors is exceeded.

Description	Maximum number of permitted pixel errors
Colour illuminated sub-pixels	1
Dark sub-pixels	1
Total number of coloured and dark sub-pixels	1

Signs of wear on the display and casing are excluded from the warranty.

Manufacturer's advice

Authorisation

This device is intended for analogue phone lines in the UK and on the Irish network.

Country-specific requirements have been taken into consideration.

Hereby, Gigaset Communications GmbH declares that the radio equipment type Gigaset C575-C575A – Gigaset C575HX is in compliance with Directive 2014/53/EU.

The full text of the EU declaration of conformity is available at the following internet address: www.gigaset.com/docs.

This declaration could also be available in the "International Declarations of Conformity" or "European Declarations of Conformity" files.

Therefore please check all of these files.

Data protection

We at Gigaset take the protection of our customers' data very seriously. It is precisely for this reason that we are ensuring all our products feature "Privacy by Design" as standard. All information we collect is used to make our products as good as possible. In the process, we ensure your details are protected and only used for the purposes of making available to you a product or service. We know which path your data takes through the company and ensure this happens in line with data protection specifications in a secure and protected manner.

Environment

Our environmental statement

We, Gigaset Communications GmbH, bear social responsibility and are actively committed to a better world. Our ideas, technologies and actions serve people, society and the environment. The aim of our global activity is to secure sustainable life resources for humanity. We are committed to a responsibility for our products that comprises their entire life cycle. The environmental impact of products, including their manufacture, procurement, distribution, utilisation, service and disposal, are already evaluated during product and process design.

Further information on environmentally friendly products and processes is available on the Internet at www.gigaset.com.

Environmental management system

Gigaset Communications GmbH is certified pursuant to the international standards ISO 14001 and ISO 9001.

ISO 14001 (Environment): Certified since September 2007 by TÜV SÜD Management Service GmbH.

ISO 9001 (Quality): Certified since 17/02/1994 by TÜV SÜD Management Service GmbH.

Disposal

Batteries should not be disposed of in general household waste. Observe the local waste disposal regulations, details of which can be obtained from your local authority.

All electrical and electronic products should be disposed of separately from the municipal waste stream via designated collection facilities appointed by the government or the local authorities.

This crossed-out wheeled bin symbol on the product means the product is covered by the European Directive 2012/19/EU.

The correct disposal and separate collection of your old appliance will help prevent potential negative consequences for the environment and human health. It is a precondition for reuse and recycling of used electrical and electronic equipment.

For more detailed information about disposal of your old appliance, please contact your local council refuse centre or the original supplier of the product.

Care

Wipe the device with a **damp** cloth or an antistatic cloth. Do not use solvents or microfibre cloths.

Never use a dry cloth; this can cause static.

In rare cases, contact with chemical substances can cause changes to the device's exterior. Due to the wide variety of chemical products available on the market, it was not possible to test all substances.

Impairments in high-gloss finishes can be carefully removed using display polishes for mobile phones.

Contact with liquid ⚠

If the device comes into contact with liquid:

1   **Disconnect the power supply.**
2   **Remove the batteries and leave the battery compartment open.**
3   Allow the liquid to drain from the device.
4   Pat all parts dry.
5   Place the device in a dry, warm place **for at least 72 hours** (**not** in a microwave, oven etc.) with the battery compartment open and the keypad facing down (if applicable).
6   **Do not switch on the device again until it is completely dry.**

When it has fully dried out, you will normally be able to use it again.
